April 3, 2019

Dear Recruiter,

I am writing to apply for the role of Data scientist – Merch Inventory Algorithms which came to my attention through LinkedIn. I am a Data science Masters candidate at Illinois institute of technology (graduating on May 2019) and currently serving as Data science intern at Uptake technologies. I am amazed by the highly informative data science blogs of Stitch Fix, which provided me additional inspiration to be part of a highly bright, experienced and focused data science team.

I have above five years of work experience as software analyst and automation engineer at Tata consultancy services for American Express clients. During this time, I had interacted with clients to understand their requirements and successfully lead my team towards developing automation products and high impact software releases for core banking features. During the Masters program, I have worked on interesting data science use cases, specifically in image analytics from wildlife camera traps, analyzing telecommunications big data, Fake News prediction using NLP and Crime prediction of university campus. At Uptake, I am working on package development for conducting faster industrial data assessments and working with clients to build predictive maintenance models for process improvement. I am excited about the great opportunity to work alongside the expert data science team at Stitch Fix to build smarter systems for innovative recommendations, customer satisfaction and business growth.

I have attached resume with application for your kind review. I would certainly appreciate an opportunity to speak with you for discussing my interests and qualifications in more detail. Please feel free to contact via email at [msreekumar@hawk.iit.edu](mailto:msreekumar@hawk.iit.edu) or by phone at 603 205 5986. Thank you for your time and consideration.

Sincerely,

Manu Sreekumar
