Dear Recruiter,

I am writing to apply for the role of Data scientist at Xevo which came to my attention through Linkedin. I have graduated from Illinois Institute of Technology in Masters in Data science program and completed Data science internship at Uptake technologies. I am extremely interested to join the data science team at Xevo to explore the interesting data science challenges in car software industry.

I have above five years of work experience as a software analyst and automation engineer at Tata consultancy services for American Express clients. I had successfully led my team towards developing automation products that resulted in 300K project cost savings and quality assurance of high impact software releases. During Masters program, I worked on interesting data science use cases, specifically on image analytics for tagging specific animal images from wildlife camera traps, analyzing telecommunications big data to optimize maintenance schedules, Fake News identification using NLP in Reddit Platform and Crime prediction of university campus to optimize surveillance routines. At Uptake, I had worked on package development using R for conducting faster industrial data assessments, identify industrial KPIs and build predictive maintenance data science models.

I am very excited by the potential and scalability of Xevo market and Journeyplace in building an interconnected network of car users. It would be awesome to work alongside the talented data science team on building the smartest car device on the planet. I have attached resume with application for your kind review. I would certainly appreciate an opportunity to speak with you for discussing my interests and qualifications in more detail. Please feel free to contact via email at msreekumar@hawk.iit.edu or by phone at 603 205 5986. Thank you for your time and consideration.

Sincerely,

Manu Sreekumar
